

THE ADVENTURES OF PETE THE PEEL

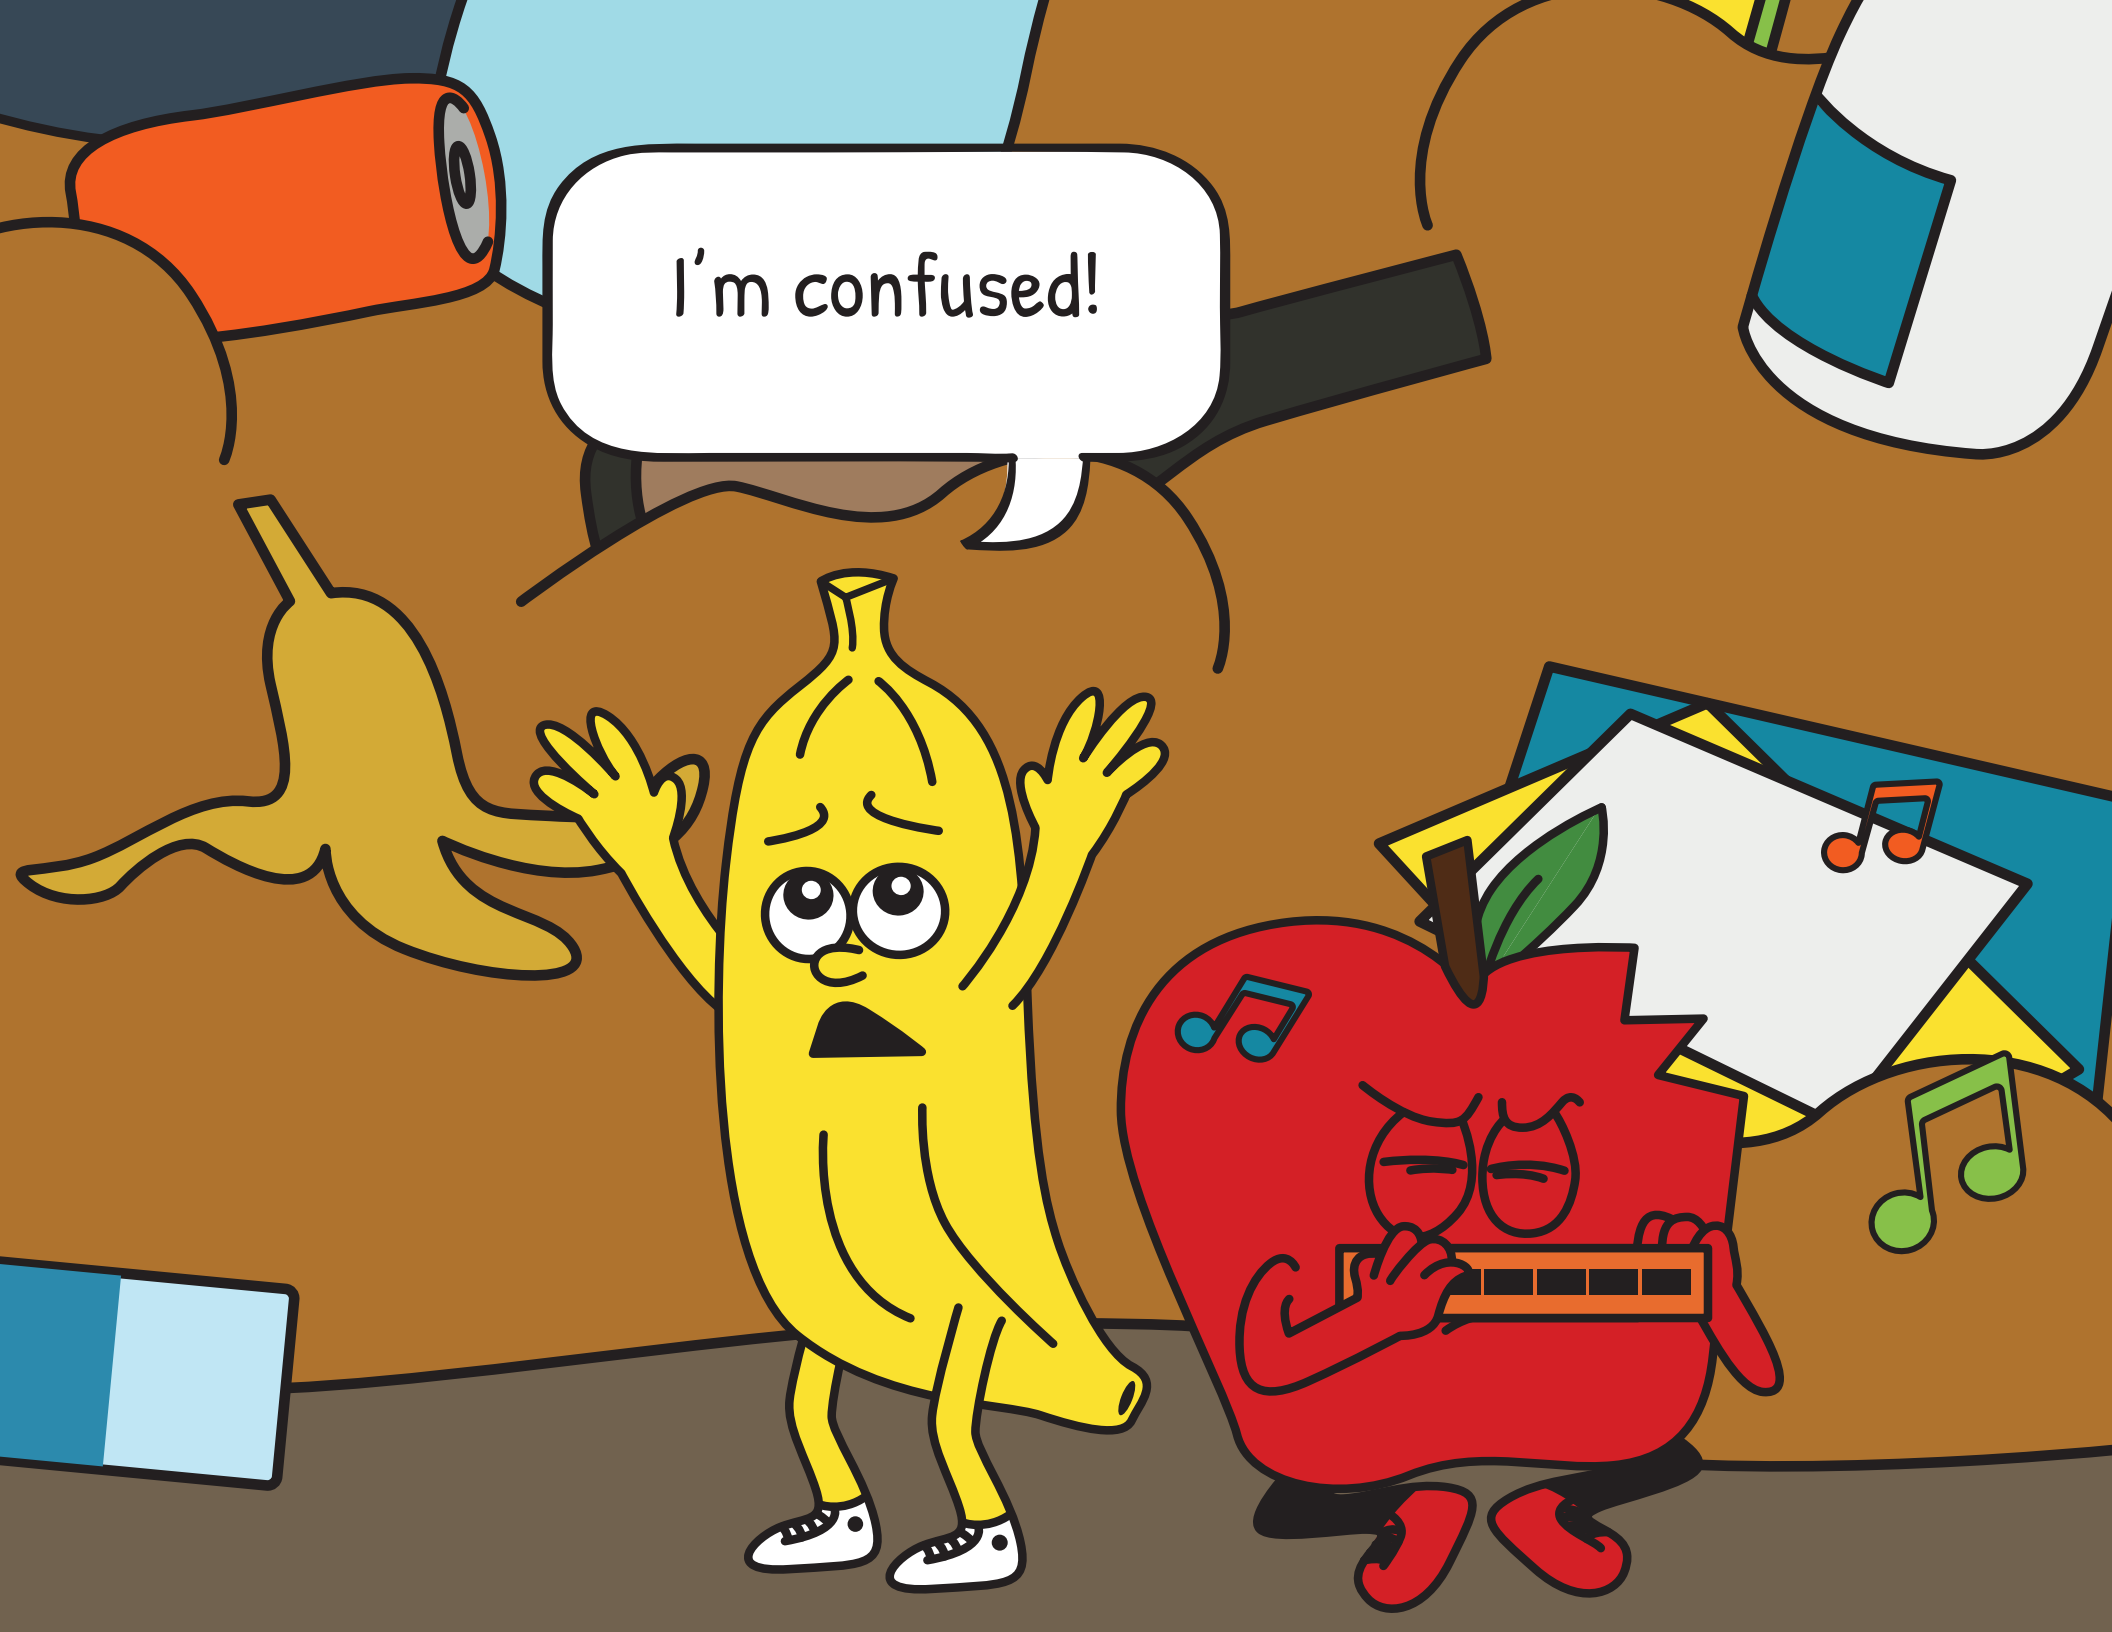

AN RNG STORY

RECENTLY IN LANDFILLVILLE...

I'm confused!

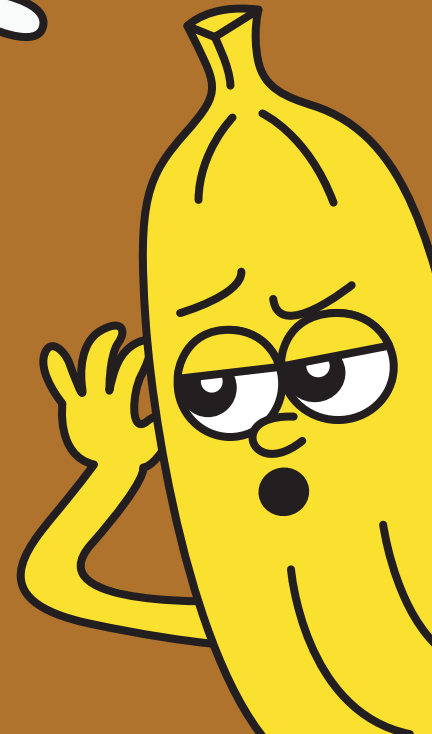

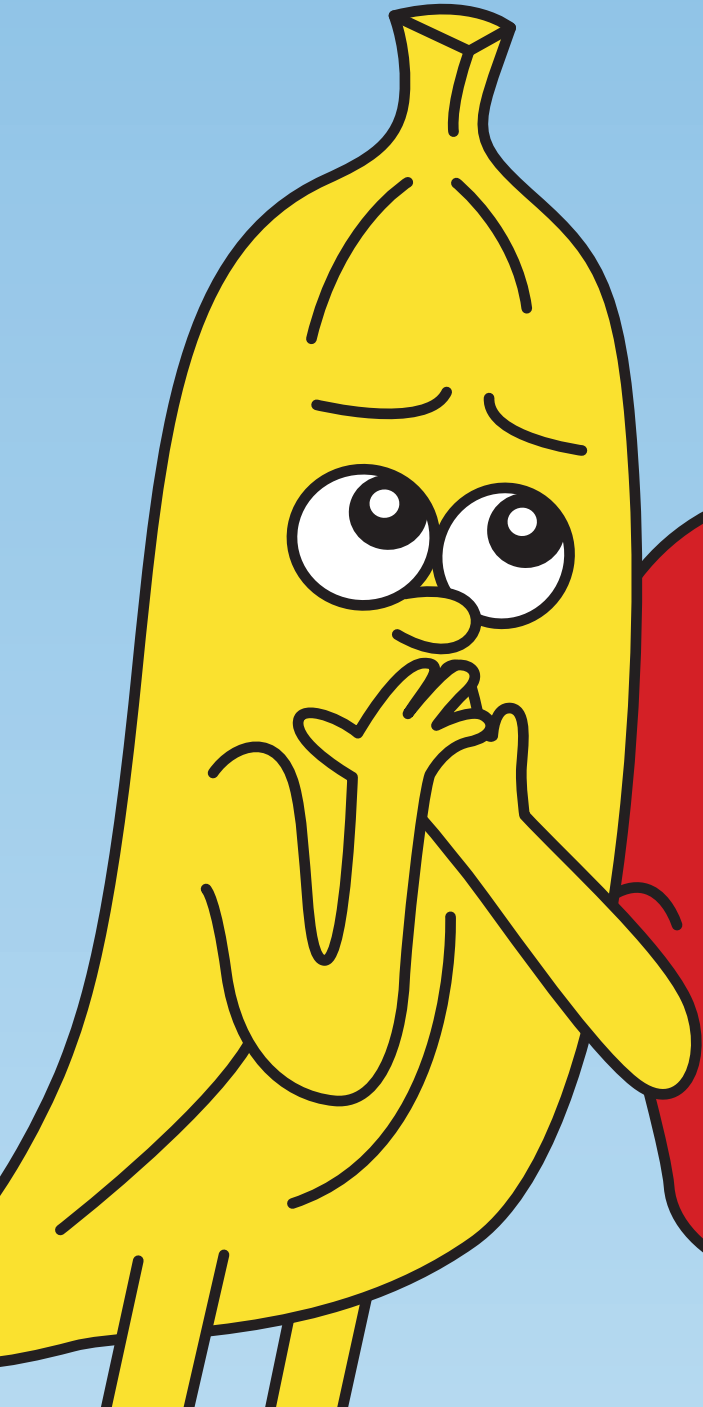

Why wasn't I recycled?
I had big dreams of
becoming a sparkling
water bottle!

We should have been
recycled. I would very
much like to be a national
newspaper myself.

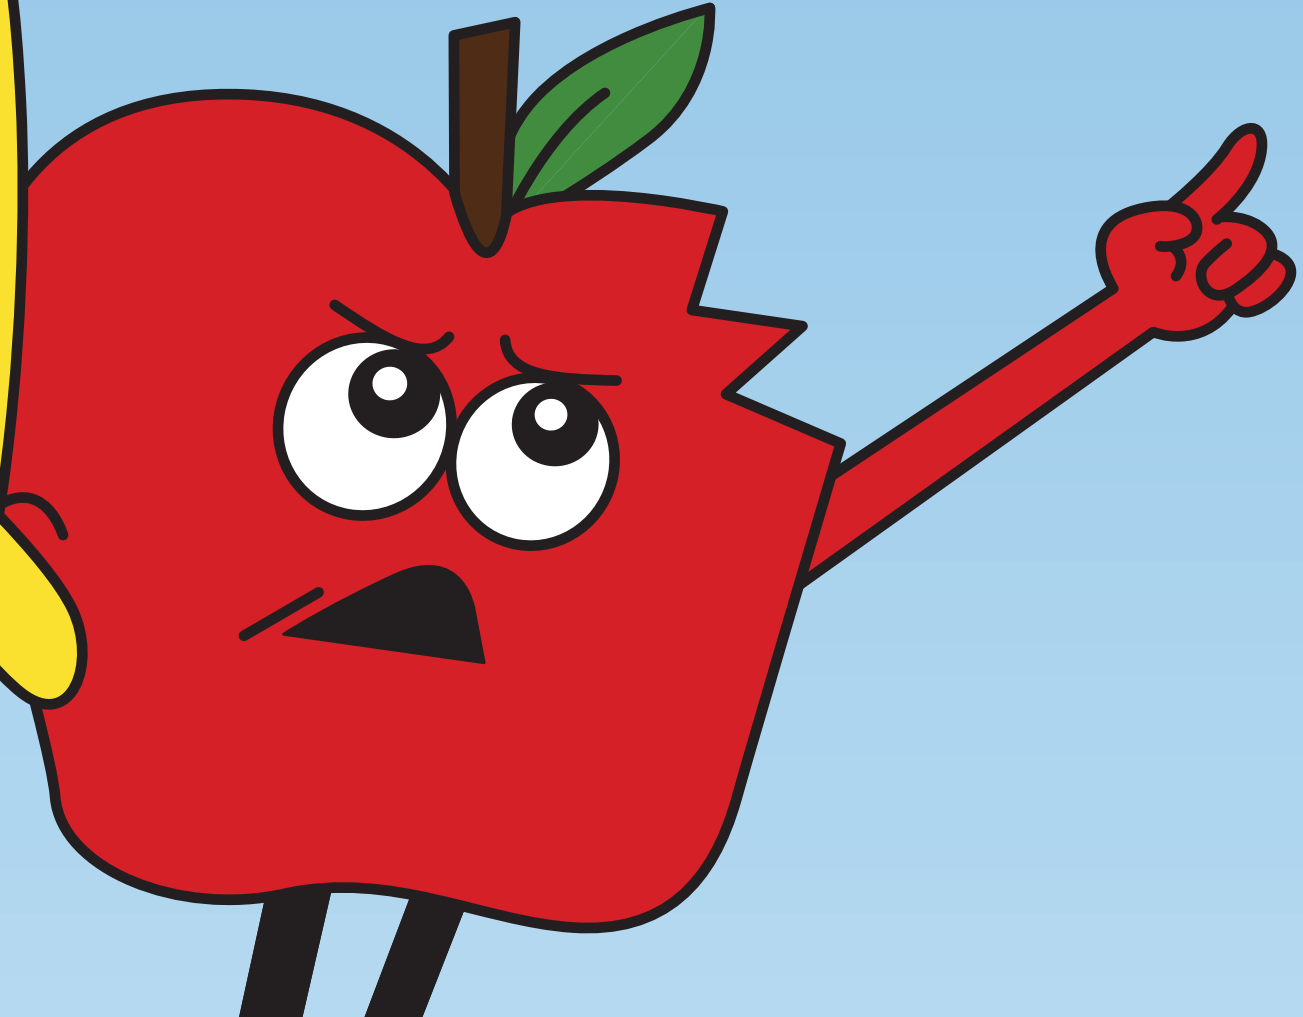

CITY NEWS

SODA

HEY PETE, I THINK
I HEAR SOMEONE
COMING!

We look forward to adding a renewable natural gas facility to Landfillville!

CITY NEWS

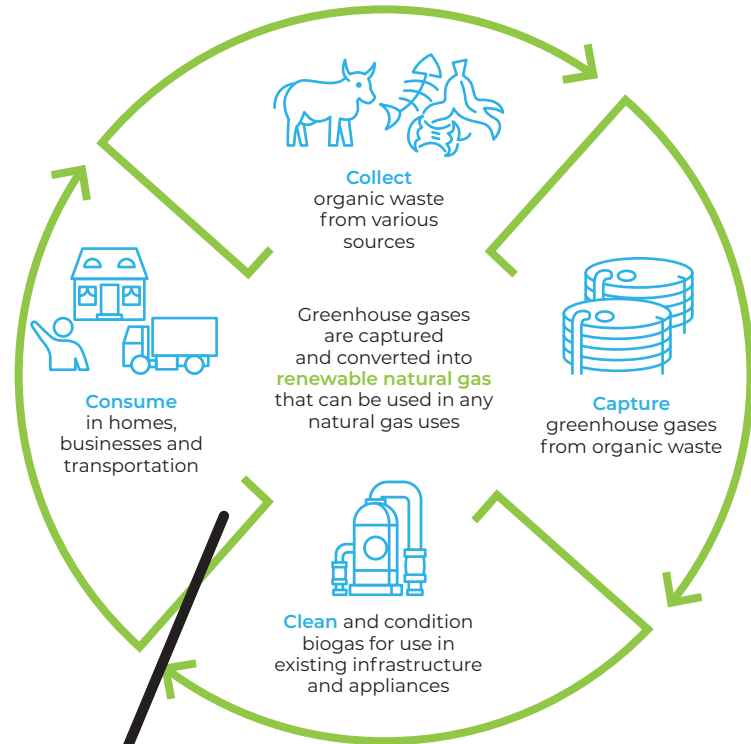

SODA

I'm going to take these
to recycling on
my way out.

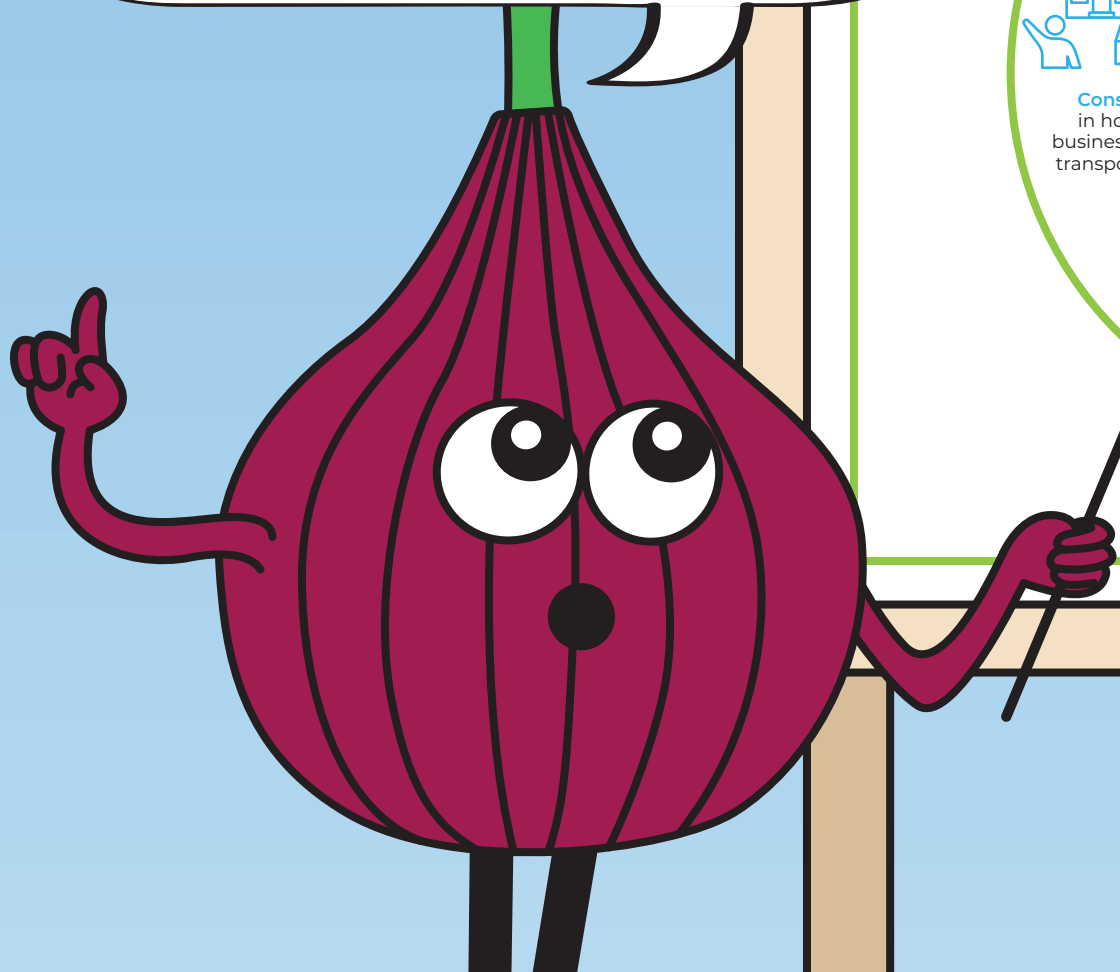

What happens to us now?

Collect. Capture. Clean. Consume.

#RNG

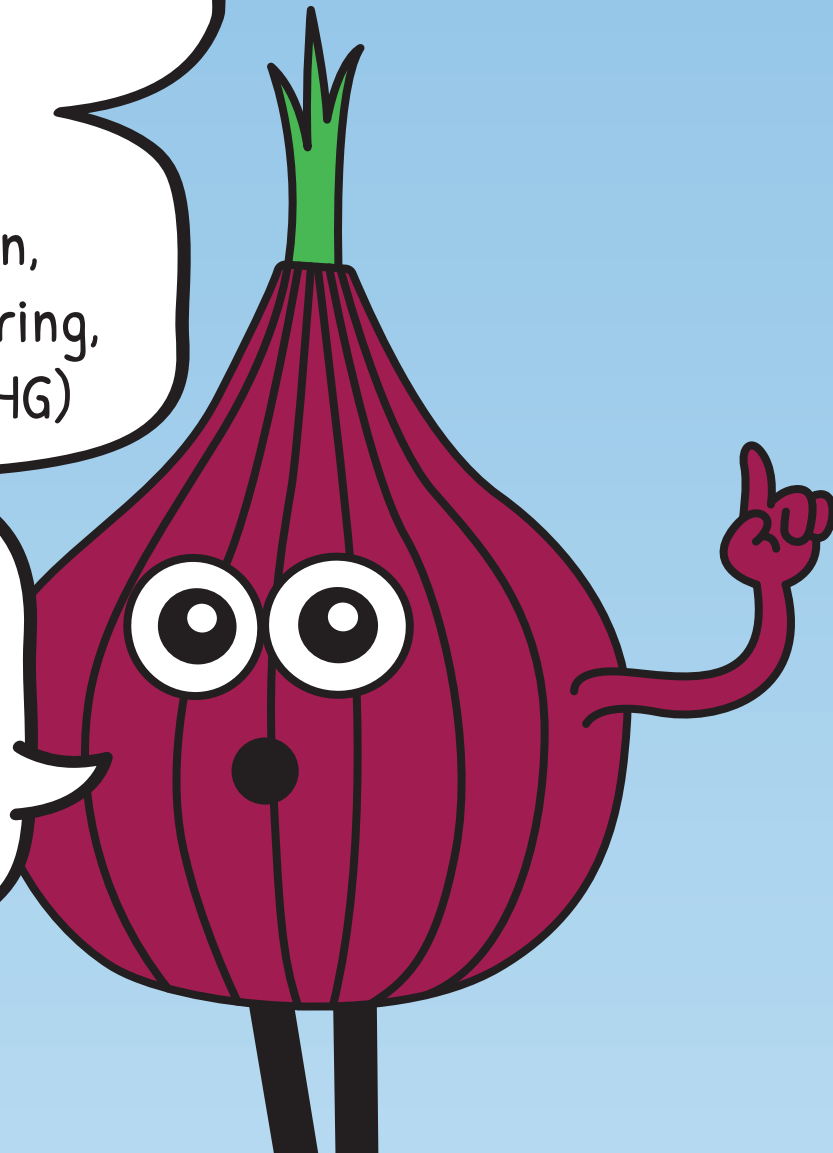

Allow me to explain how renewable natural gas works...

Renewable Natural Gas (RNG) is a clean, affordable and reliable waste-derived fuel that can be used to power homes, businesses and even vehicles.

Every community in the world produces waste. As that waste breaks down, it emits methane, which is a naturally occurring, but potent and harmful greenhouse gas (GHG)

RNG facilities capture this methane from existing food waste, animal manure, wastewater sludge and garbage, and redirect it away from the environment, repurposing it as a clean, green energy source.

LET'S BECOME RNG!

We are almost finished.
Ready to capture some
methane and convert it to
clean energy, team?

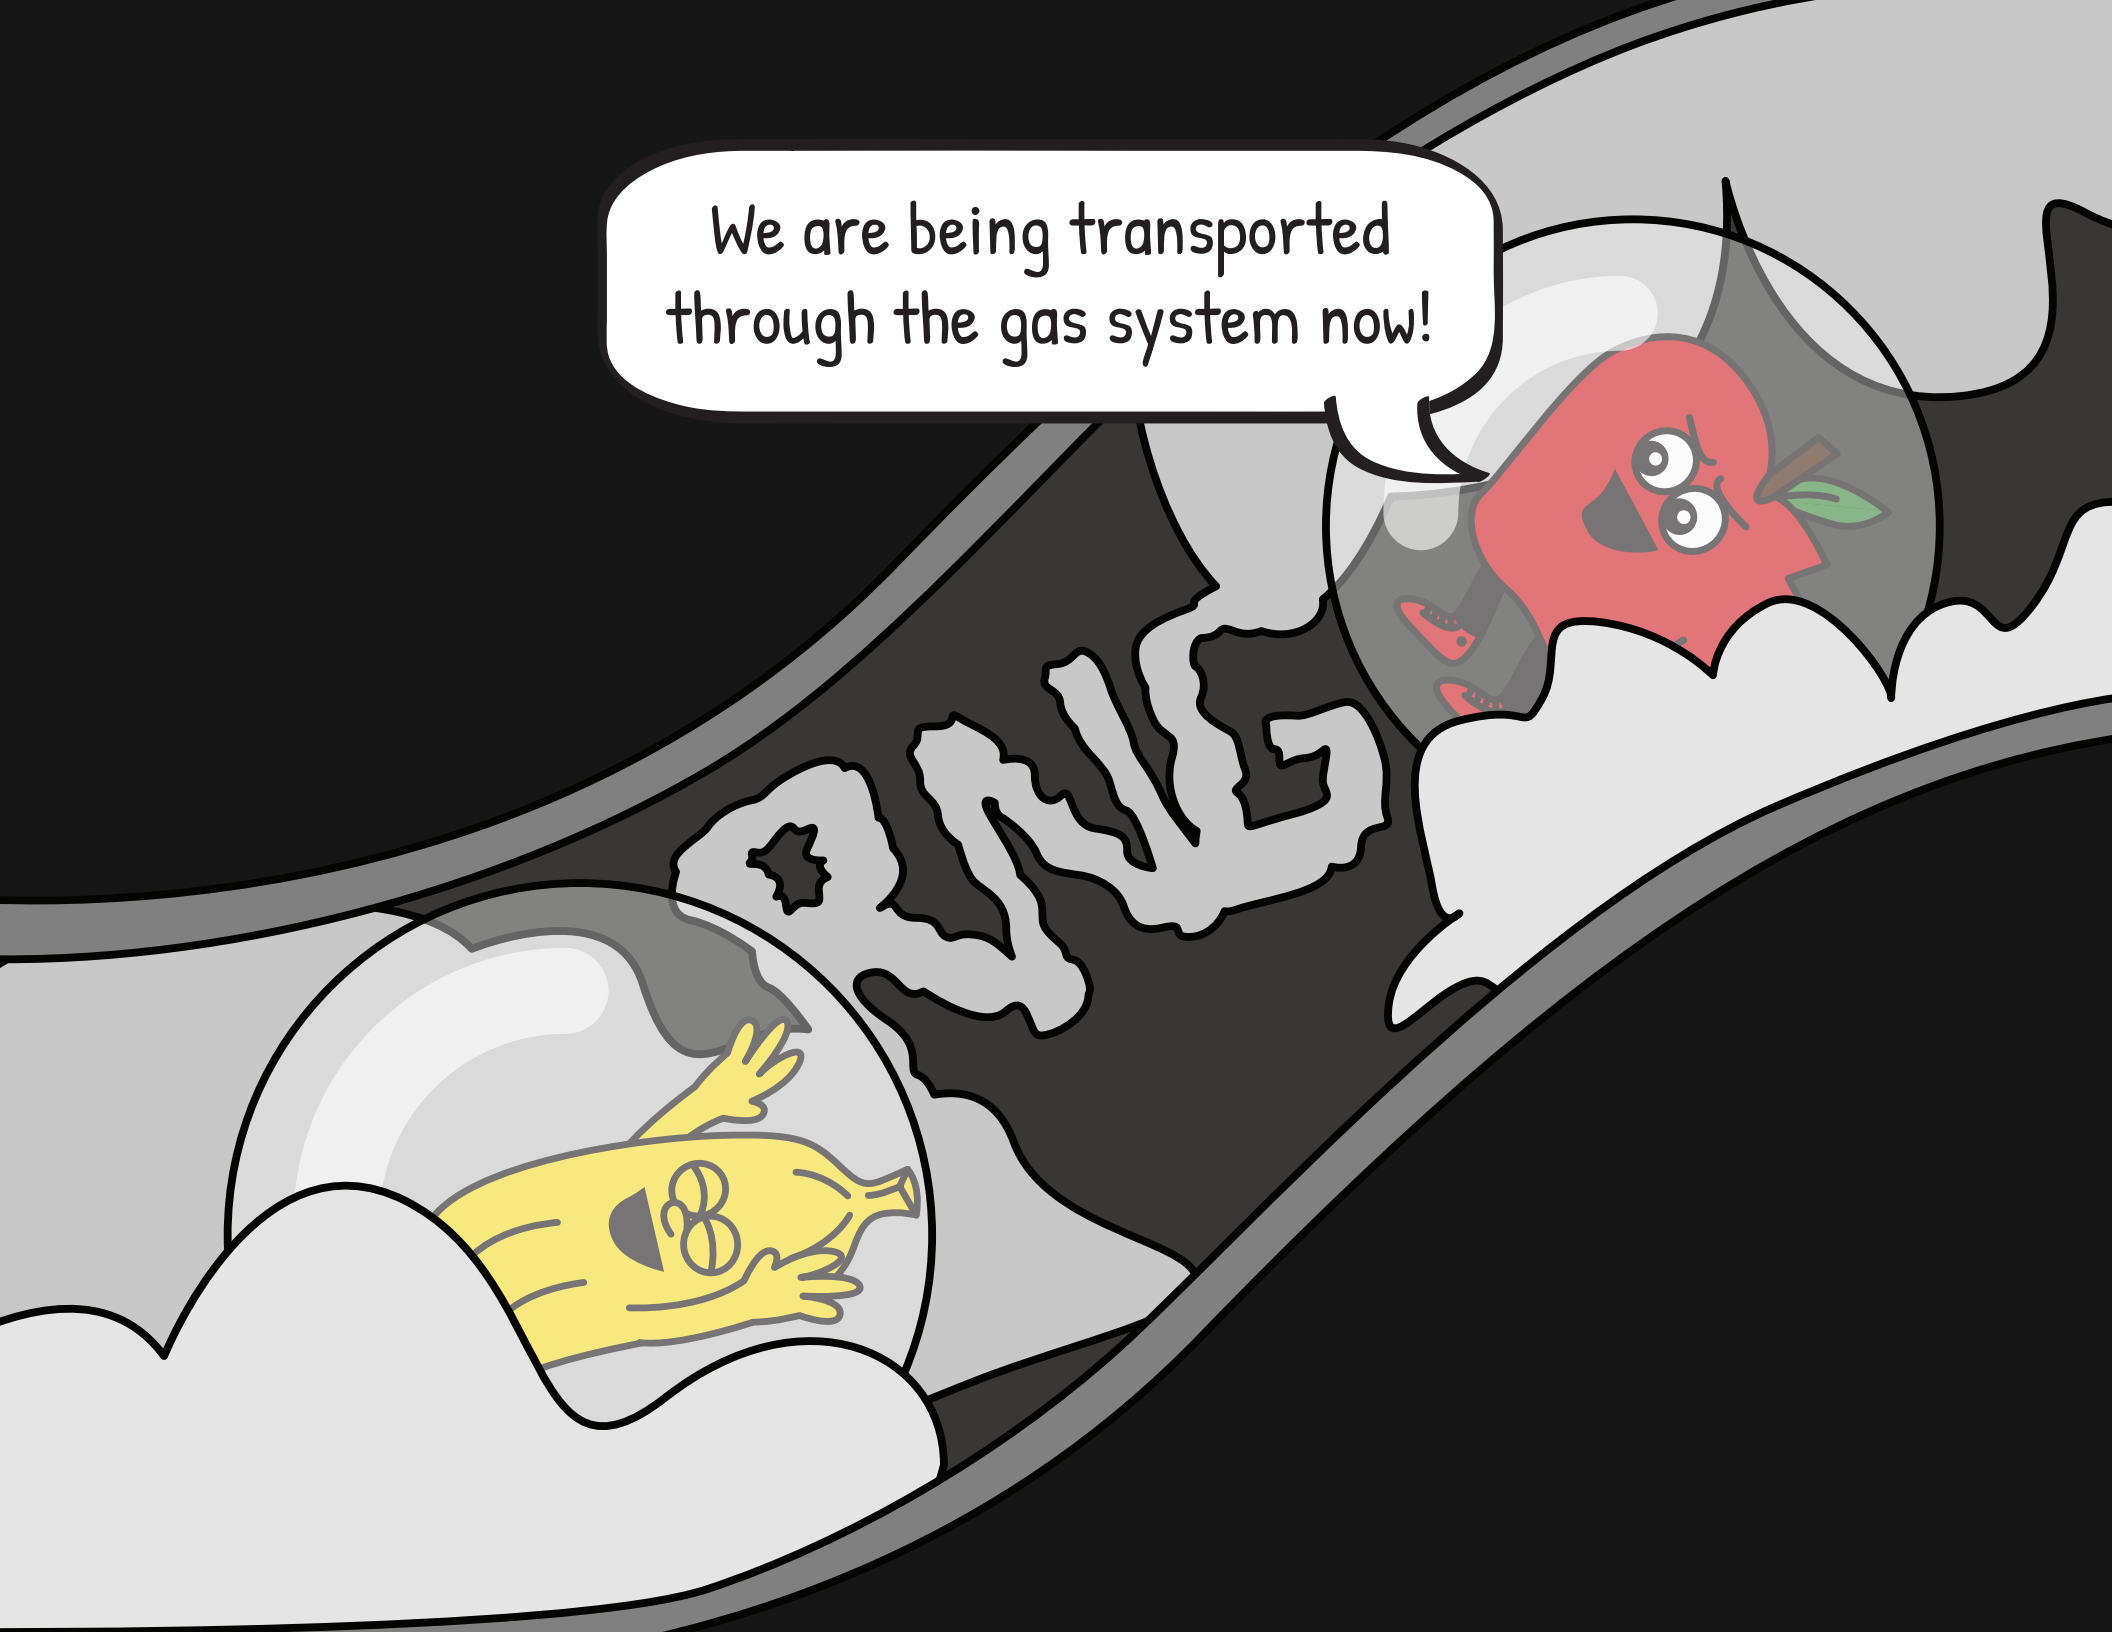

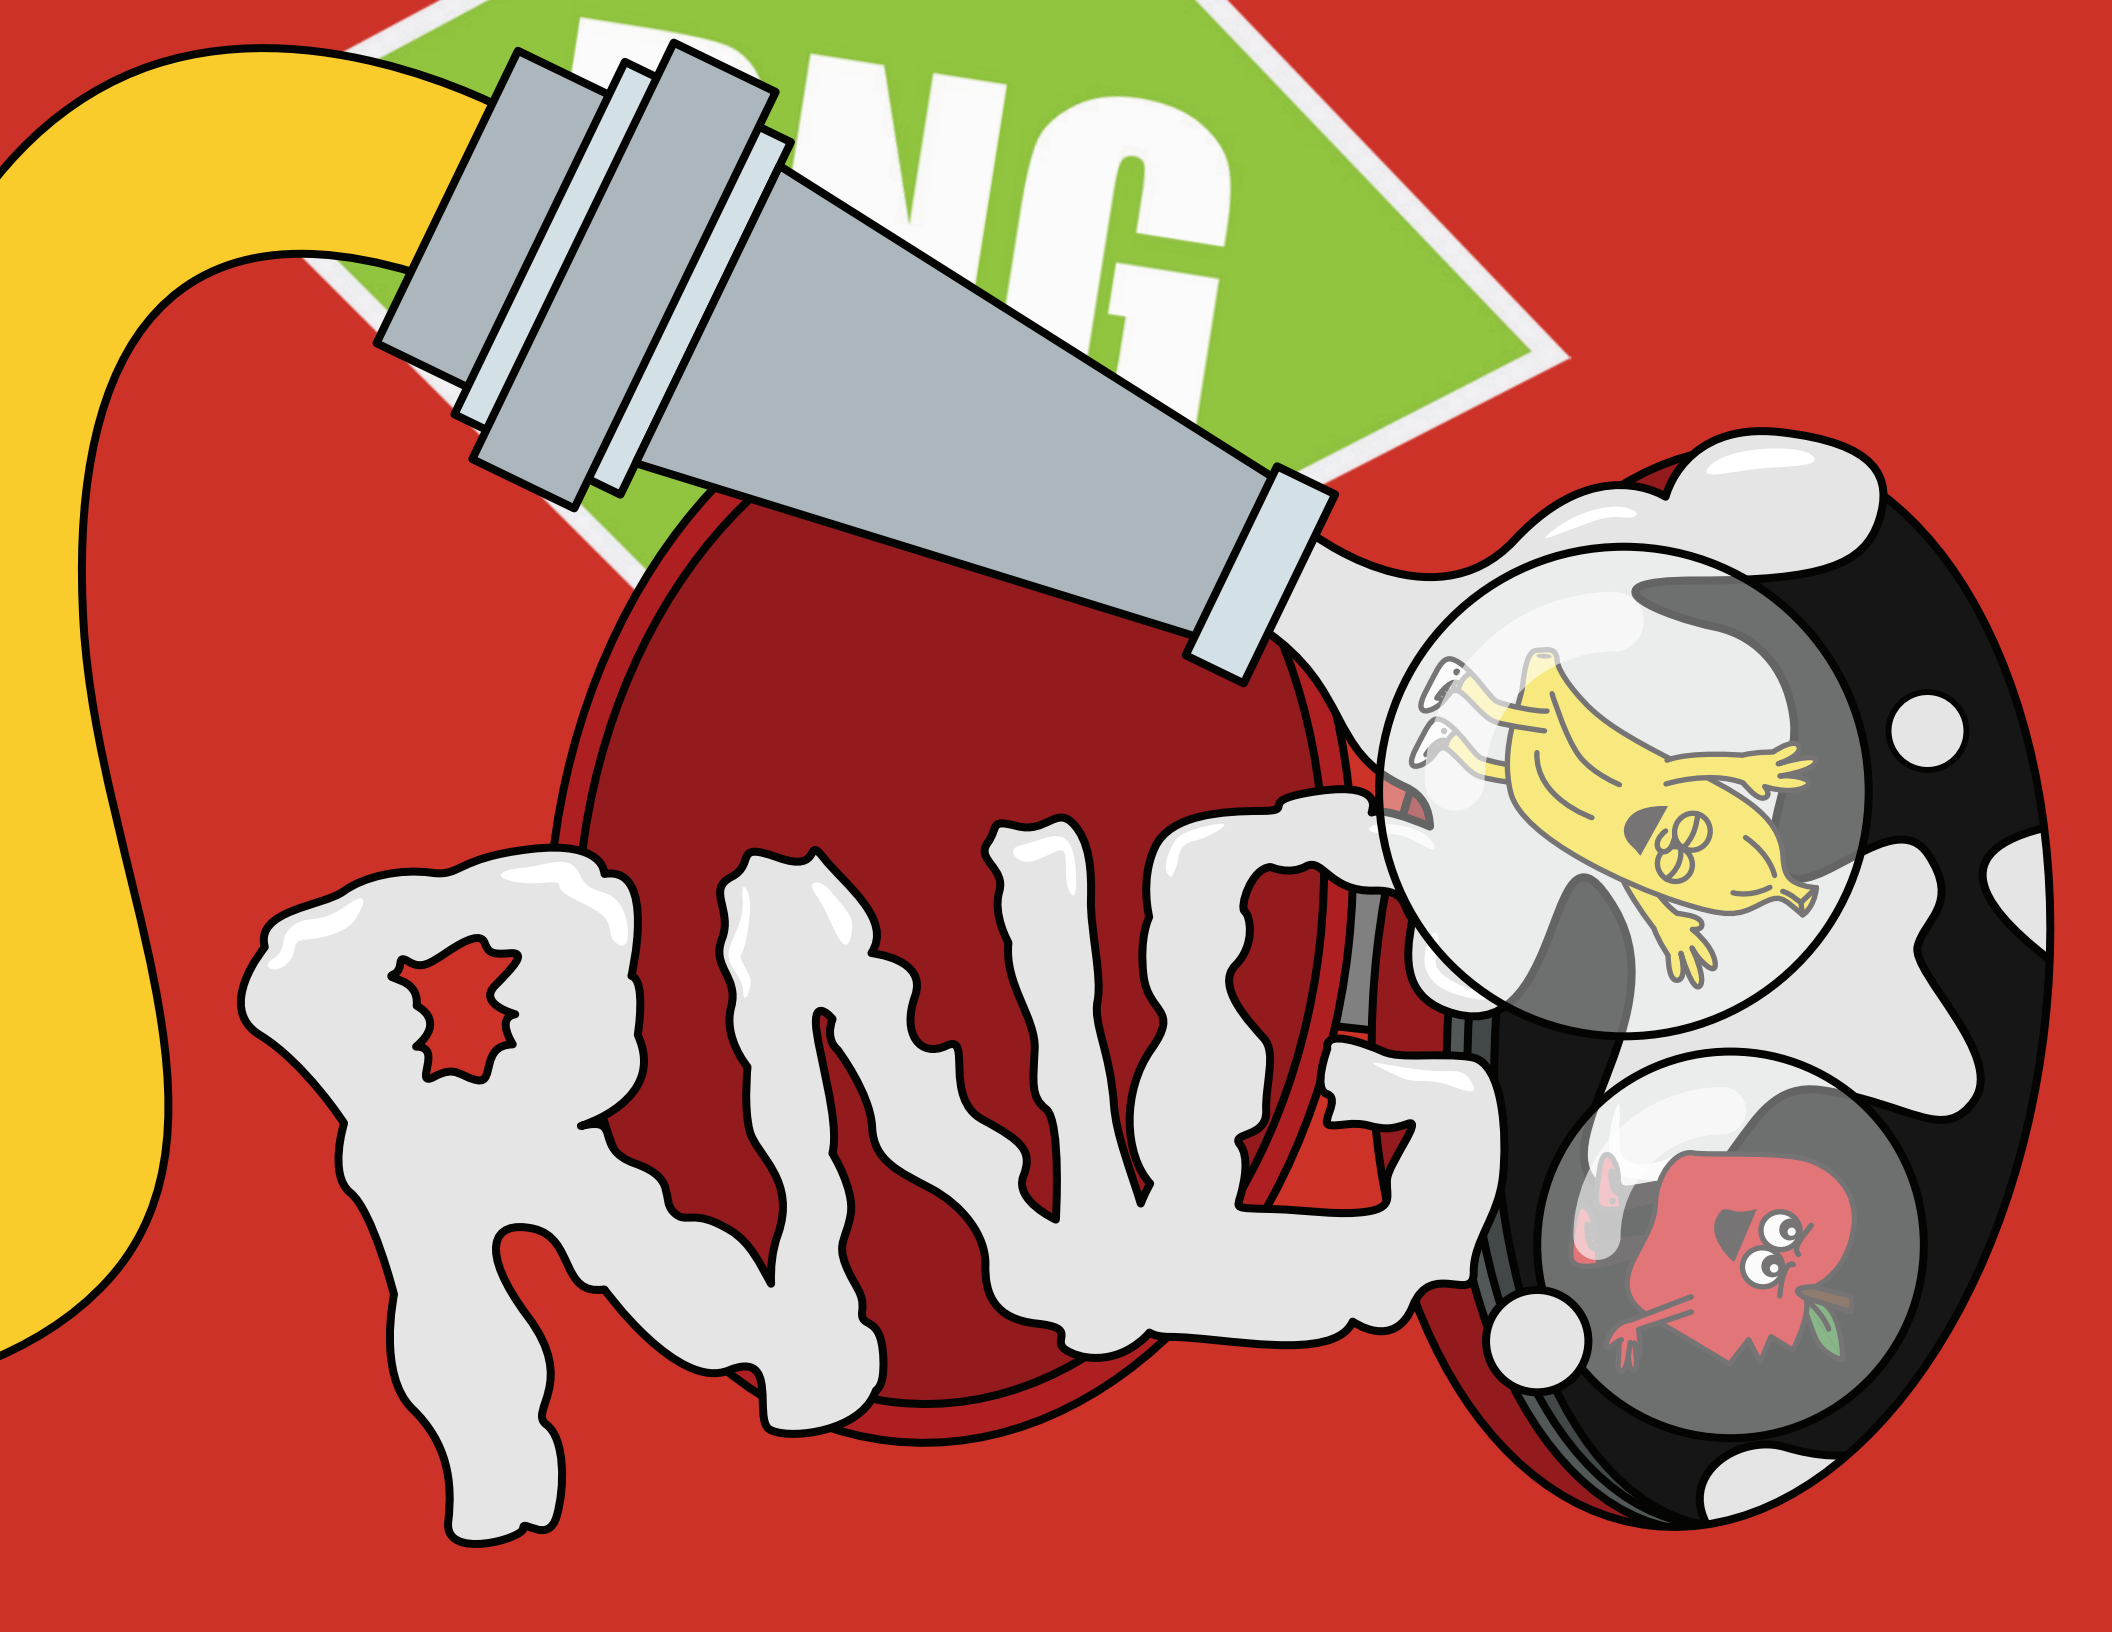

WOOHOO!

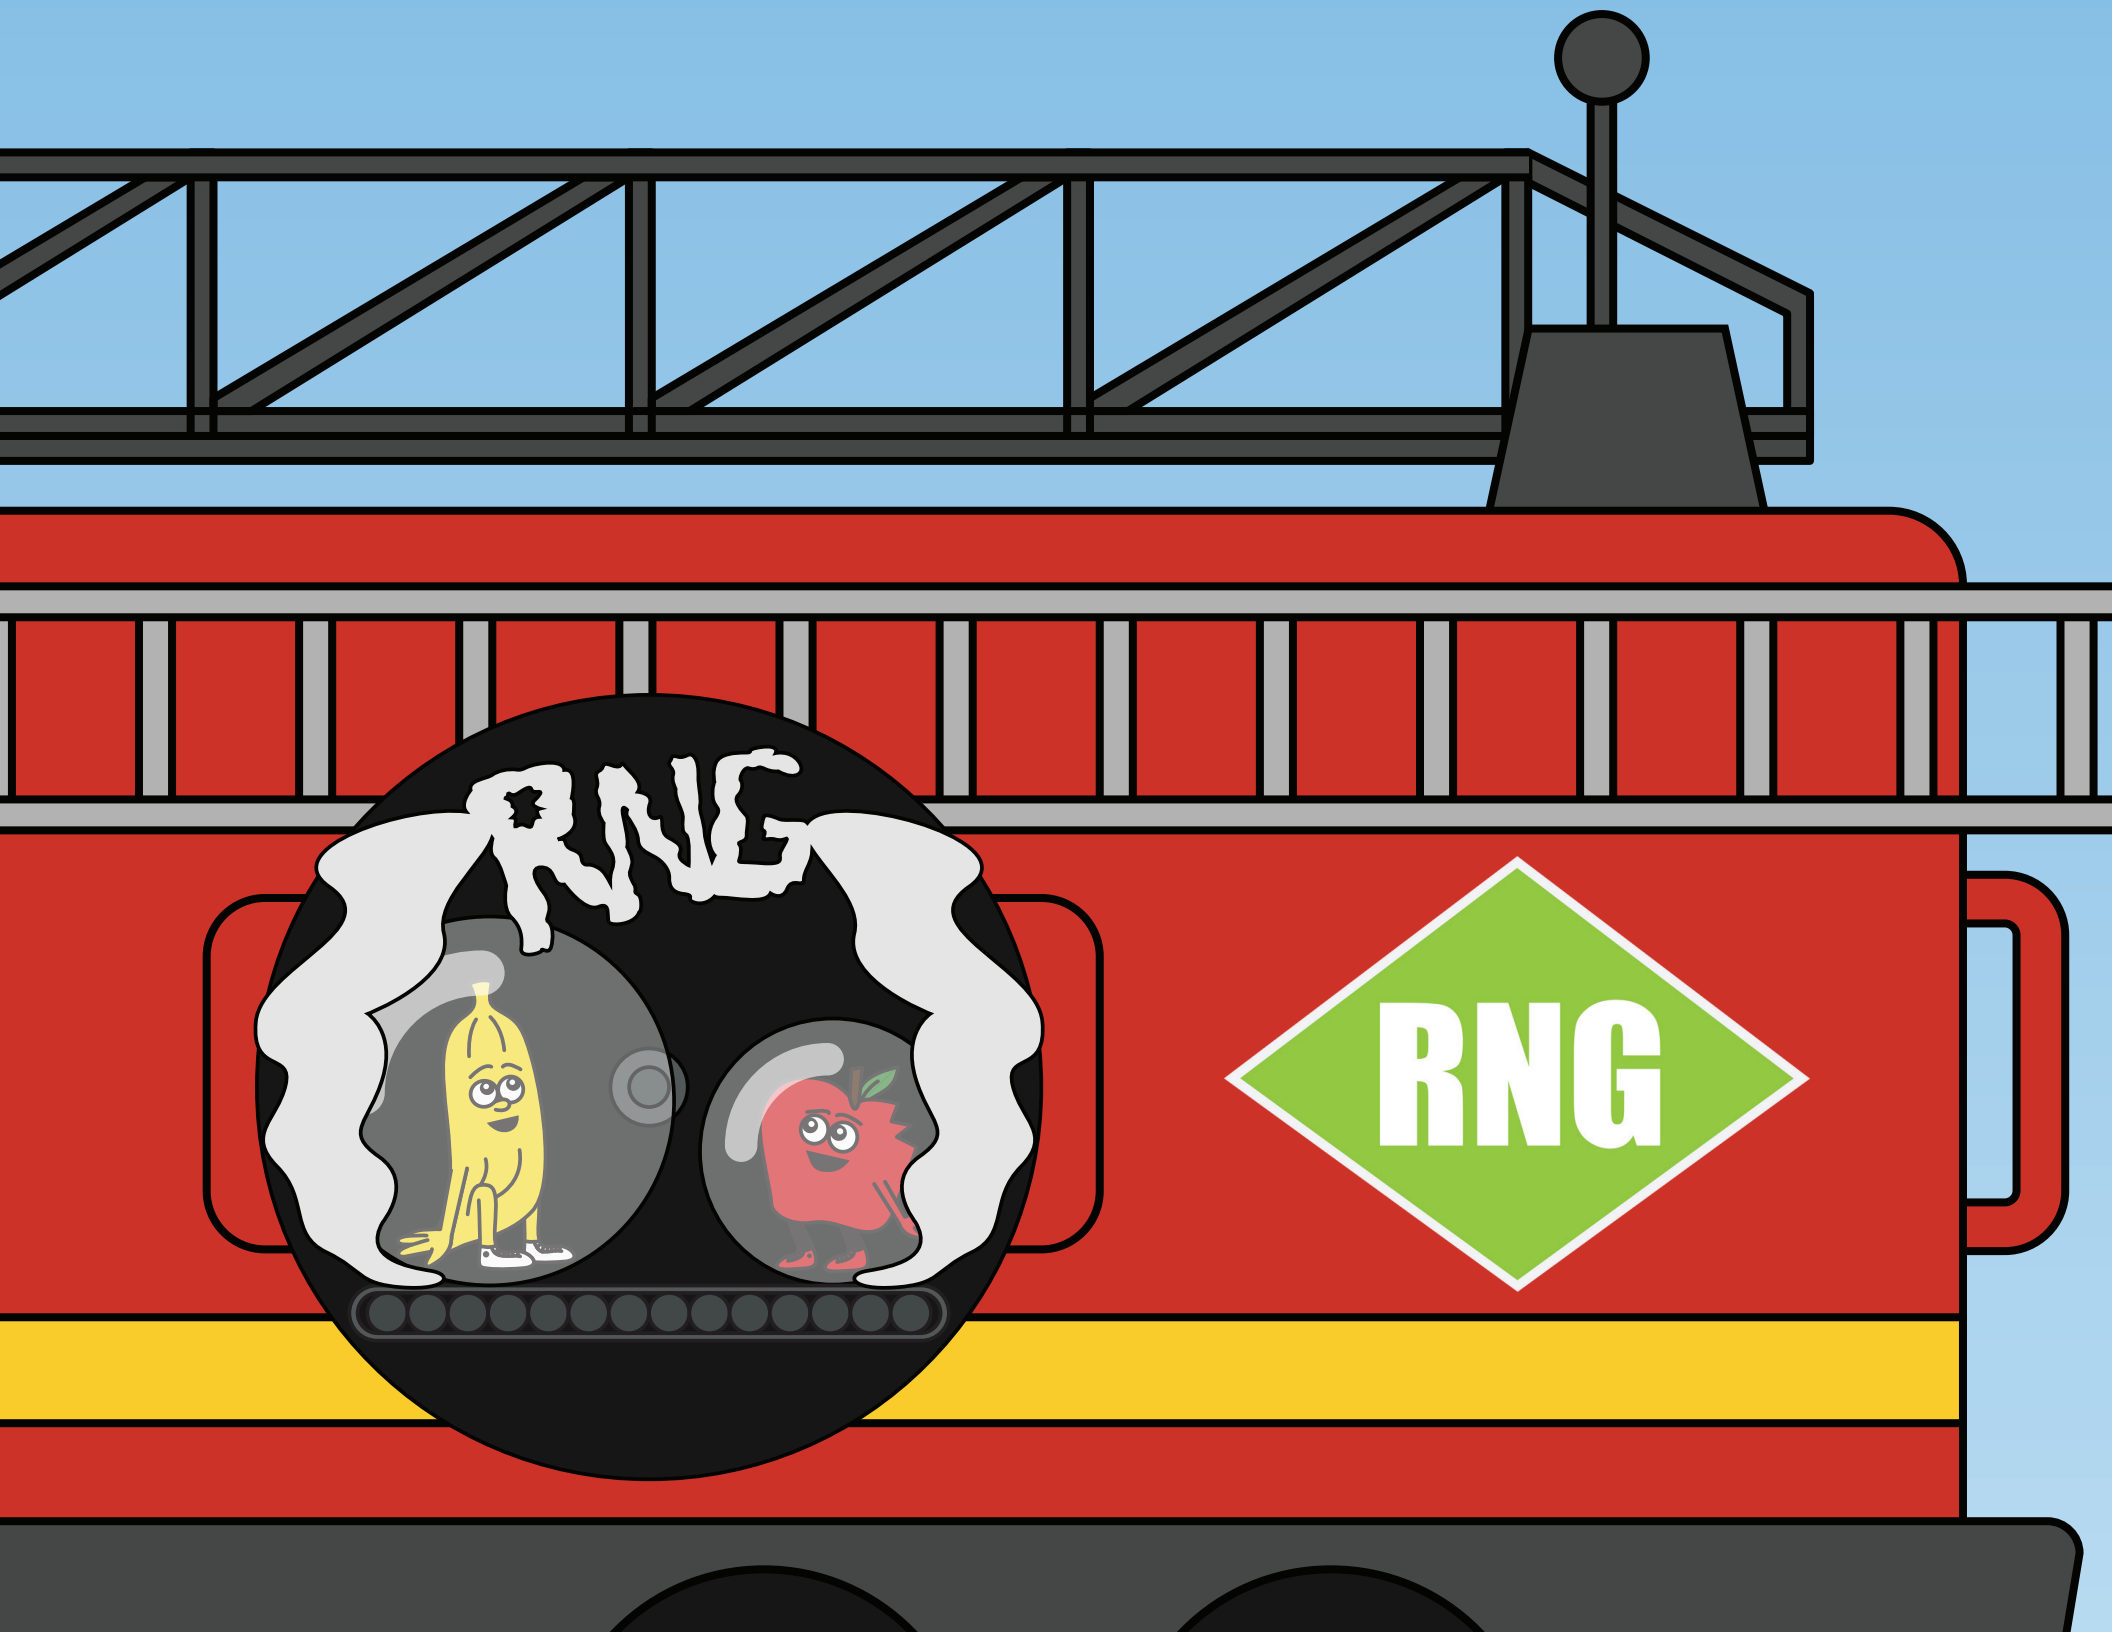

I think they are capturing the methane escaping from us now before it goes into the atmosphere and converting it into renewable natural gas!

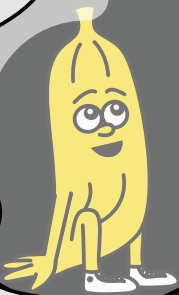

We are being transported through the gas system now!

HELP! MY KITTEN IS TRAPPED IN A TREE!

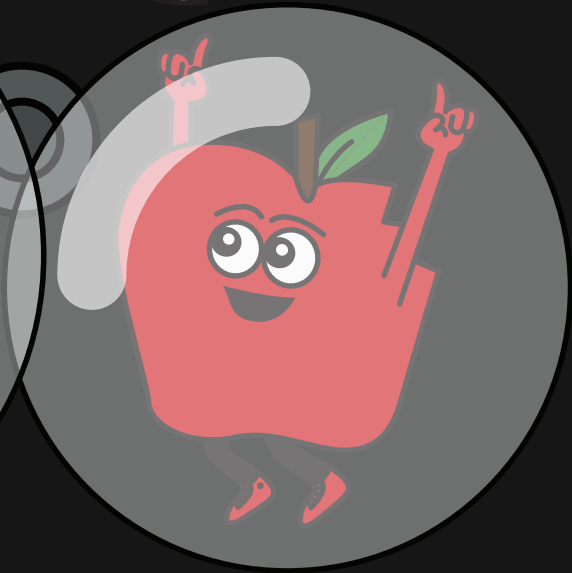

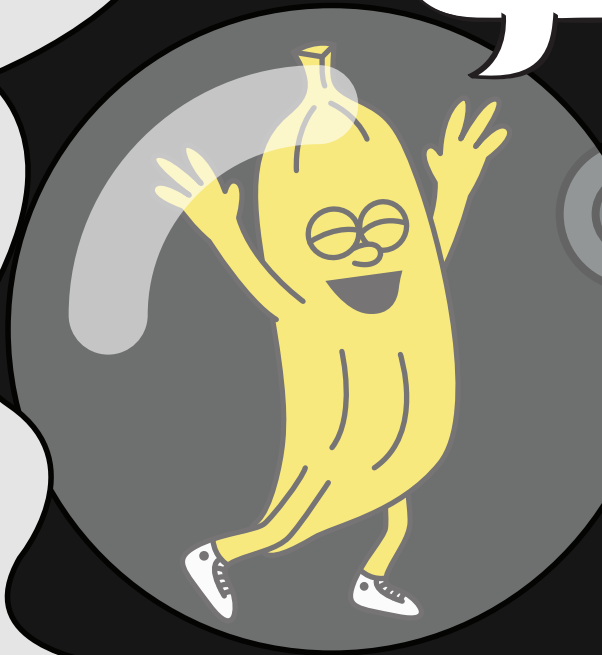

Thank you to the fire department
for getting here so quickly!
You saved my kitten!

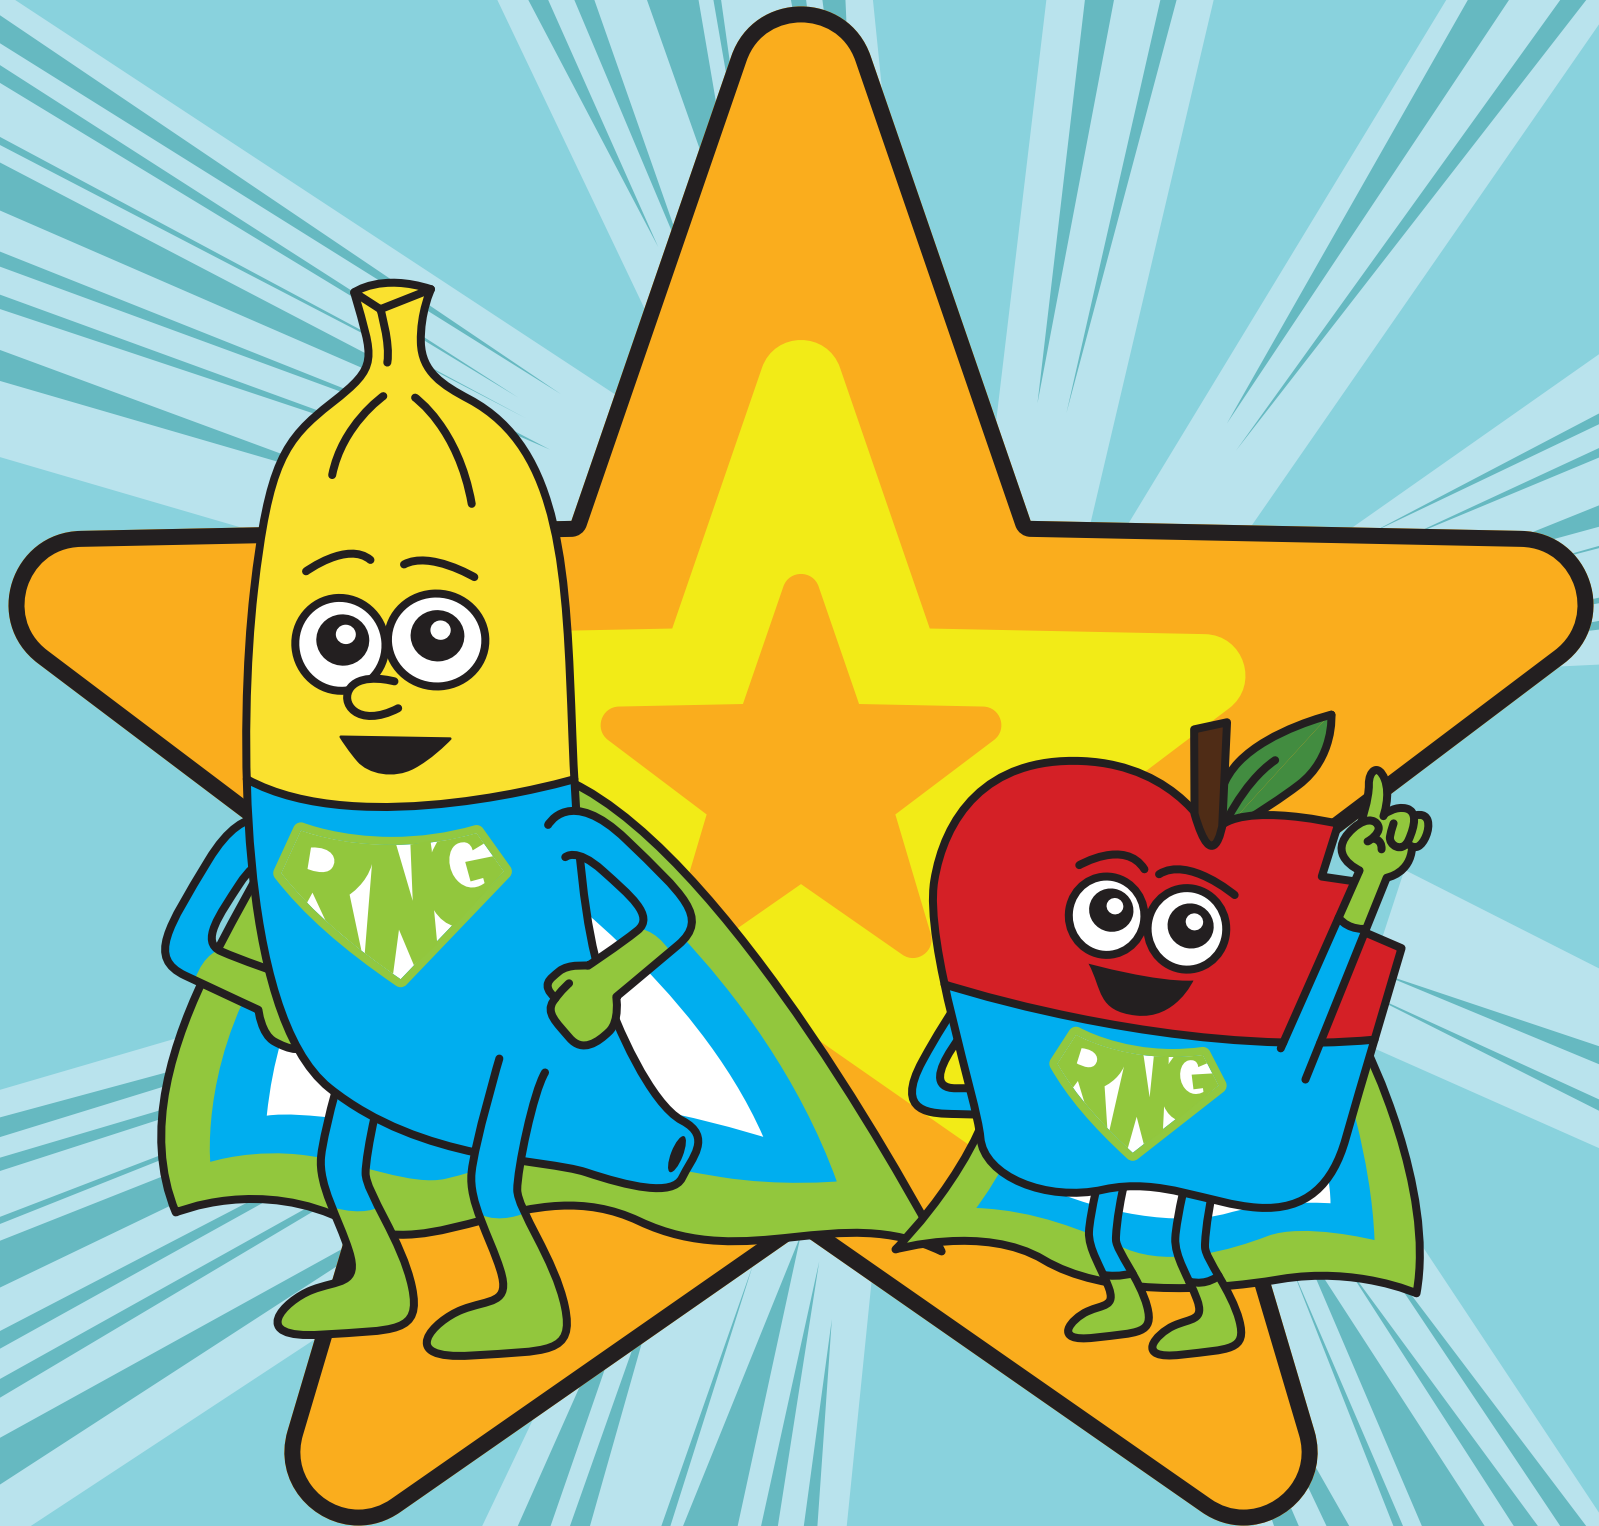

FRUITS

FRUIT

We did it!

**REDUCE, REUSE AND RECYCLE
AND FOR EVERYTHING ELSE RNG.**

EVERYTHING HAS A PURPOSE
